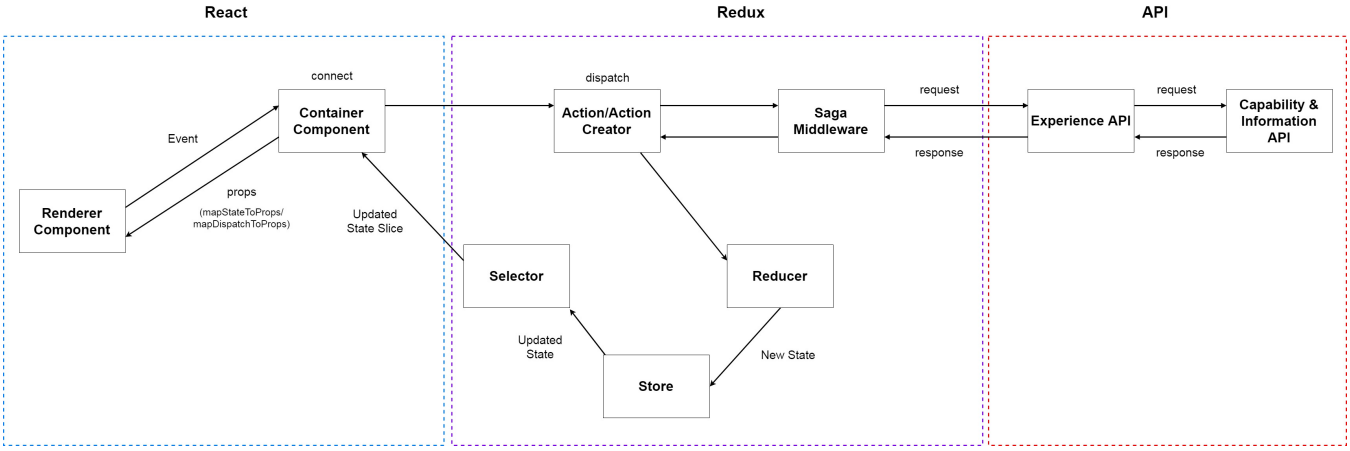
UI Coding Standards



UI Code can be generally divided into 3 sections as shown above

Naming Conventions

Type	Recommended File Name	Recommended Component Name	Notes
Page Component	xxx**Page**.tsx	xxx**Page**	
Layout Component	xxx**Layout**.tsx	xxx**Layout**	
Container Component	xxx**Container**.tsx	xxx**Container**	• Connects to Redux Store • Delegate rendering to Presentational components
Functional/Renderer Component	xxx.tsx	xxx	
Reusable Component	xxx.tsx	xxx	
Tests	xxx.**test**.tsx		Unit Tests
Styles	src/common/**styles**.tsx src/containers/xxxContainer.**style**.tsx (page level, not reusable) eg: PageHeader.**style**.tsx	**Styled**xxx	Style Component Style definitions
Types	src/common/**types**.ts - local types src/types/**index**.ts - imported packages src/containers/xxxContainer.**type**.ts (page level, not reusable)	xxx**Type**	TypeScript **type** definitions, not **interface**
Constants	src/common/**constants**.ts src/containers/xxxContainer.**constant**.ts (page level, not reusable)		
Utils	src/common/**utils**.ts src/common/Date.util.ts, src/common/URL.util.ts src/containers/xxxContainer.**util**.ts (page level, not reusable)		

Other Recommendations

- All references or checks against string values should be via constant/enum
- Improve existing code when you change it

Logging

Please think carefully before you log. Make sure you log enough information to debug via splunk in case a production issue occurs (error/exception). At the same time be mindful to not log excessively as it causes performance issues, noisy log (splunk gets costly too) etc. Also NEVER log data, especially if it contains PII (Personally Identifiable Data).

Commonly used VSCode extensions & tools

Refer this for the extensions recommended by MESH along with the correct config for consistency:
2.5 Tools

Other VS code extensions used commonly and recommended by the team:

Github copilot
Auto Rename Tag
change-case
Code Spell Checker
Coverage Gutters
CSS Modules
DotENV
EditorConfig for VS Code
Error lens
ES7 React/Redux/GraphQL/React-Native snippets
ESLint
Git Blame
Git Graph
Git History
GitHub Copilot Chat
GitLens - Git suppercharged
Highlight Matching Tag
Import Cost
IntelliCode
IntelliCode API Usage Examples
IntelliSense for CSS class names in HTML
Jest Runner
Live Preview
Material Icon Theme
Multiple cursor case preserve
npm Intellisense
npm Outdated
Nx Console
Path Intellisense
PostCSS Language Support
Prettier - Code formatter
Snyk Security
TabOut
Tailwind CSS IntelliSense
VSCode React Refactor
vscode-icons
